And students, scientists, engineers, doctors, and other technical professionals use it to create technical drawings and schematics. AutoCAD is known for its many built-in features, such as the ability to export drawings in various formats, including Adobe Acrobat and Microsoft Publisher, to various file formats, such as AutoCAD DWG and PDF, and to other software applications, such as Microsoft Office. In addition to its native functionality, AutoCAD can be extended by the use of add-ons. software, services, and support The software and its functionality are directly marketed as AutoCAD by Autodesk, but can be ordered from third-party distributors. The free version of AutoCAD, AutoCAD LT, only allows for a single user to be logged in at a time and does not allow the import or export of any type of data. Autodesk offers AutoCAD for purchase to create and use the software, and the ability to share the drawings, such as for use by other Autodesk users, or third-party users who can be licensed to use the software. The software is designed to allow multiple users to interact with a single drawing file. While the standard licence allows a single user to create a drawing or model, the Commercial Plus licence allows multiple users to use the software simultaneously in a single file on a single machine. While the software can be used for model-based design, the first emphasis was on construction-based design, so it did not initially include any tools for model-based design, but the latest versions include some of the most modern features. The new features can be added to AutoCAD using the Plugin Extras Add-on. A number of available add-ons include: CadR and CAD Revit (Mac, Windows) – CadR and CAD Revit is the AutoCAD extension for AutoCAD LT and Map 3D and creates a cad—cad compatible file format which is compatible with CAD Revit. BIM 360 – New in AutoCAD 2018.2, the BIM 360 add-on allows an entity created in AutoCAD to be viewed as a BIM entity in Revit. eDrawings – New in a1d647c40b

Starting this weekend, people looking to get to the movies will have a whole new option for navigating Times Square: the Circle Line. Fittingly, it's the same circle line that the Metropolitan Transportation Authority uses to travel around Manhattan. This time around, though, it's the circular subway line that'll be transporting people around Manhattan's most famous street. Starting Monday, the circle line will be temporarily shut down between 34th Street and 14th Street so it can be upgraded, so don't be surprised if you see some congestion as you travel to a movie, play or other event in the area. The MTA says this upgrade will be completed by the end of the year. New York City has rolled out the Atlantic Avenue Line on a temporary basis, but the circle line will give riders a comfortable and convenient way to get around, especially since you'll be able to find yourself in the middle of the action without even having to step outside.
