### **CurrentWare Gateway Crack + Free (Updated 2022)**

With CurrentWare Gateway, you can restrict access to Internet resources, either at the router or on your internal network. CurrentWare Gateway works by inserting a black or white list on your router so that the request for a webpage has to pass through a filter of URL blacklists or URL whitelists. This way you can easily block or allow Internet access, according to the enterprise policy you want to set up. The tool is easy to use, fast and has a multilingual user interface. It is possible to setup the black and white lists in only a few steps. The tool requires no additional software to be installed on the computer, and is the right solution to block unauthorized accesses or to protect the internal network. CurrentWare Gateway features: • Simple and effective: CurrentWare Gateway provides a simple and easy-to-use interface. It is fully compatible with any Web browser and it requires no installation on the computer. • Security at both ends: Through CurrentWare Gateway you can ensure Internet security both on your Internet connection and on your internal network. You can choose between two methods: - Restrict access to the Internet: Through the blacklist or whitelist you can block URLs by category, while the whitelist allows you to allow particular website access. - Restrict access to the Internet: You can also prevent the download of certain files from particular websites. • Easy configuration: With CurrentWare Gateway you can configure your filter in only a few clicks. The web interface allows you to create black and white lists, where you can add sites you wish to block or allow access to. The filter will be applied on the router of the Internet connection and it will be automatically updated with the latest security updates. • No additional software: You do not need to download any software on the computer, nor you need to configure a single process for it. CurrentWare Gateway is a gateway solution and it has no impact on the computer on which it is installed. • Management from a single console: CurrentWare Gateway has a web-based interface and it can be accessed through any Web browser. The web interface allows you to configure the black and white lists, and to block or allow the URLs that the computer will access. • Open source: CurrentWare Gateway is free, open source software. You can download it from: • Multi-lingual user interface: The interface allows you to configure the black and white lists in a language you choose. The interface

### **CurrentWare Gateway**

CurrentWare Gateway is a comprehensive Internet security solution for your PC, as well as for an entire LAN. This agentless tool is designed to control the Internet access via your network, by filtering the URLs that are being visited. The solution provides a reliable protection since it can insert the filter between the router and the LAN. CurrentWare Gateway offers a reliable security tool for businesses with a high number of employees while still allowing them to perform their work. The solution does not require deployment as a client program. Instead, it is designed to be installed on a system with two net cards. The Gateway computer, or the machine on which you install CurrentWare Gateway, requires two net cards, namely one connected to the Internet router and the other linked to the LAN. Not only can you provide secure Internet access to the computers connected to the local network, but you may also apply the filters for Wi-Fi Hotspots. CurrentWare Gateway can be operated through a browser-based console, which allows you to create black and white lists, in which to add blocked, respectively allowed URLs. The tool uses an extensive URL category database, controlling a multitude of Internet addresses. You may set filters by categories, thus blocking all work inappropriate websites with a few mouse clicks. Moreover, you can block the download of particular types of files, depending on the nature of your business, in order to avoid the transfer of dangerous files. Otherwise, you can also block the download of files which usually hinder the bandwidth, such as multimedia formats. CurrentWare Gateway is a suitable solution for businesses, for institutions that offer public Internet access and for any user or entity that wishes to ensure Web security. The tool is flexible, easy to configure and allows you to ensure secure connections for computers in your network or Wi-Fi hotspots. CurrentWare Gateway Description: Details CurrentWare Gateway is a comprehensive Internet security solution for your PC, as well as for an entire LAN.
