- Simple, single click access to your system remotely with a simple URL. - Secure connection to your system via SSL and a secure key which your Web Browser does not need to support - Optional client-side updates to the Java engine via a simple, standard update process - A secure connection is maintained to your system regardless of which 'browser' you're using - Key creation is fast and easy - Key encryption is performed on the client side for maximum privacy - Macros are simple, powerful and powerful key management - Key management is simple, yet powerful - Easy to use and maintain - Built in user-management features - No need to run an SSL browser or download client-side software. - HTML/XML compatible, for the widest possible number of supported browsers - Built-in Client-Server communication - Key Management - MACROs are created with the push of a button. - Key management is handled by the program. - MACROs are created with the push of a button. - Key management is handled by the program. - MACROs are created with the push of a button. - Key management is handled by the program. - MACROs are created with the push of a button. - Key management is handled by the program. 77a5ca646e

SSL-Explorer Community Edition Crack + License Key Full PC/Windows

Sleuth SSL-Explorer is a remote access application that allows you to securely grant access to your corporate network to a user/organisation anywhere in the world. SSL-Explorer does not require client-side software to be installed on the user's PC. It is based on the ubiquitous Java technology and requires just a standard web browser to connect. Sleuth SSL-Explorer provides you with a number of mechanisms that allow you to easily provide full extranet access to key business partners and external consultants. Using SSL-Explorer you can quickly and easily provide full extranet access to key business partners and external consultants. Sleuth SSL-Explorer provides users with easy and secure remote access to files and resources on your internal network. The application also provides users with remote desktop capabilities allowing them to remotely manage your servers, routers and other network hardware. SSL-Explorer provides an intuitive interface that allows you to easily configure access rights for your users. Similarly the application can be configured to protect sensitive information using industry standard encryption technologies. No client-side software needs to be installed on the users PC and maintenance is centralised and simple. Any configuration required is centralised in the application's web management console. All configurations can be stored in a central database to ensure that they remain consistent regardless of the application's version. Sleuth SSL-Explorer has been configured to use standard network protocols and hence relies on just a standard firewall configuration. As a result, the firewall can be configured to 'lock-down' access to your network leaving only one port open on your firewall to access your data. Sleuth SSL-Explorer allows your users to access your Windows file system, MS Outlook Web Access 2003 and even your desktop remotely via the web browser. The application also provides you with the ability to define reverse proxy web forwarding rules to allow users outside your network to access critical web applications hosted internally. Your email and intranet web resources are easily accessible from outside your network perimeter with just a single firewall configuration required post-installation. Any outgoing SMTP traffic through your firewall can be protected using SSL/TLS. A standard SQL Server authentication mechanism is also provided. Configurable data security schemes are provided to allow for flexible data access control. Sleuth SSL-Explorer also supports user authentication for Windows NT and 2000 systems using the standard Active Directory authentication scheme. If you wish to access your Exchange or ADO

What's New In SSL-Explorer Community Edition?

SSL-Explorer Community Edition a browser-based, GPL, SSL VPN solution.
