An advanced statistical analysis program that helps you perform from data transformation to complex non-parametric analysis StatPlus Description: StatsPlus is an advanced statistical analysis program whose purpose is to help you perform from data transformation and sampling to complex non-parametric and regression analysis, survival analysis, as well as other functions. The app comes packed with a multitude of charts (histograms, bars, areas, point-graphs, pies, statistics, control charts) and worksheet math, statistical and financial functions. It also provides support for an Excel add-in that allows you to carry out statistical tasks directly from Excel's interface. Clean feature lineup StatPlus reveals a well-structured GUI where you can input data directly into a spreadsheet or import it from HTML, XLS, CSV, SAV, ODS, or other file formats. Thanks to the multi-tabbed layout, you can work with different tabs at the same time and quickly switch between them. Editing functions Editing features are implemented for helping you activate clipboard-related tasks (cut, copy, paste), delete entries, search for items, and undo or redo your actions. A spell checker is included in the package. What's more, you can insert cells, charts, symbols, functions, comments, pictures, and hyperlinks. Each cell can be customized in terms of layout (like horizontal or vertical alignment), color, font and border. You can print the information, send it via email or export it to the same file formats as the input ones. Analysis tools StatPlus offers support for a wide range of statistical utilities so be prepared to spend some of your time discovering them. These tests are related to Comparing Means t-Tests, Pagurova Criterion, and G-Criterion, F-test, one and two-sample z-tests, correlation coefficients (Pearson, Fechner) and covariation, normality tests, cross tabulation, and frequency tables analysis (discrete/continuous). What's more, you can conduct tests related to Analysis of Variance (ANOVA) with one, two, three-way analysis of variance, data classification, Design of Experiments (DOE), as well as non-parametrics statistics, like 2x2 tables analysis (e.g. Chi-squared, Yates' Chi-squared, Exact Fisher Test), rank correlations, and Cochran's Q 09e8f5149f
