One of AutoCAD's most well-known features is its paper-less drafting process. In AutoCAD, objects and drawings can be stored on a computer and can be retrieved later for editing. The process reduces the amount of paper that's needed to create a drawing. AutoCAD also has extensive feature sets, and it is the most advanced 3D CAD software available. AutoCAD is primarily used by engineers and architects for architecture, mechanical engineering, and electrical design, but AutoCAD is also used by landscape architects, interior designers, product engineers, and surveyors. AutoCAD is a highly-professionalized 3D drawing and modeling tool. History of AutoCAD 1983: Autodesk was founded in 1982 by Dennis M. Graftie and Tom Waddell, who had worked together at Micrografx, a California-based start-up company that produced the PixelGrafter graphics tablet. In 1984 Autodesk acquired a majority share of Micrografx, which had the advantage of already owning the OEM rights to the PixelGrafter. 1988: Autodesk released AutoCAD, a 2D drafting software program that went into public beta in the United States. The program included the ImageLinker, a tool that allowed drafters to print layouts to paper, which was eventually replaced by the PageLinker, which allowed drafters to transfer layouts to paper. 1991: Autodesk released AutoCAD Mechanical and AutoCAD Electrical, which provided professional 2D and 3D drafting capabilities for mechanical and electrical engineers. Autodesk introduced Windows-based drawing and presentation programs in 1994, including: Architectural Desktop, Mechanical Desktop, Electrical Desktop, and Plant Desktop. The Windows-based programs were designed to replace the OS/2-based Workbench and Windows DOS-based AutoCAD application programs. 1999: Autodesk released AutoCAD Structural Desktop, a structural design program that allowed the creation of steel and reinforced concrete structures. 2000: Autodesk introduced AutoCAD Map 3D, which allowed users to explore building designs in 3D. AutoCAD Map 3D allowed users to create and view 3D models of buildings on a 2D map, which made it easier for engineers to evaluate their building designs. Autodesk acquired the ICE Drafting System, a 2D CAD program, in 2000. ICE Drafting System was a 3D, paperless drafting program that

Q: Will using a different Wi-Fi card help with my network connection issues? I have an Asus Wireless-N USB Adapter (RTL8188CE) and I'm having issues connecting to my home network. It works fine on my work machine, but not at home. I have both a desktop and laptop on this network. The Issue: Connect to network. Try to open internet browser I get this error: This is most certainly not the laptop or any other internet enabled device. I can still use the computer and everything else, it's just when trying to use the internet. The desktop has no issues connecting to the network. My router is a Dynex D-Link DSL 2504u. Question: What is the likely cause of the problem? I was thinking it was something to do with the card, but if it works on my work machine, I don't understand why it would cause this issue. I tried changing the name of the adapter in the adapter list, but this didn't work. Some other info: Update: This computer is the only one that has this issue, this desktop has no problems connecting. Update: The computer has been updated to Windows 8.1. I did some research and it seems that a lot of people have this issue, but this has been an ongoing problem. The reason I'm asking this question now is because this is my only issue with Windows 8.1. A: I fixed this issue by changing my network adapter from ASUS Wireless-N USB Adapter (RTL8188CE) to ASUS Wireless-N USB Adapter (RTL8188CE) ca3bfb1094

Q: Comma for the last word of a list in an email It's been a long time since I had to format an email. I am writing a letter with 6 different tasks. Can I use a comma or should I use period and put all tasks on the same line? A: A comma or period is not a different form. When they're used for a list of items they should, as they always do, be used outside the quotation marks that surround them. When they're in quotation marks, they're indicating a string or a quoted item. More importantly, with your problem of 6 tasks, you shouldn't be using a comma. You could use a period instead, but if you want people to read the list of 6 tasks as one list (even though it is) it makes more sense to use a comma. /* * Copyright Andrey Semashev 2007 - 2015. * Distributed under the Boost Software License, Version 1.0. * (See accompanying file LICENSE_1_0.txt or copy at * */ /*! * \file time_traits.hpp * \author Andrey Semashev * \date 22.04.2007 * * \brief This header is the Boost.Log library implementation, see the library documentation * at
