If you need to back up a big system, the application can back up the whole system, a Windows Registry or individual files and folders including application, system, shared and all files and folders. For the whole disk, it does not save any personal data. Once you begin an operation, the back up becomes active automatically. You can also manually start the back up operations. There are some restore points that can be saved. With these you can recover from any crashes in your operation. A log file of the execution of the operation is stored. The log file enables you to track the whole operation. Besides, CloneApp has several other nice functions like being able to save URLs and clipboard which helps if you need to back up b7e8fdf5c8

CloneApp

CloneApp is designed to streamline and improve the backup process, by providing options for saving registry entries, as well as individual files. Can create restore points comprised of several items The resource is highly intuitive and flexible. The main window displays the programs currently installed, as well as quick-links to frequently-accessed folders (e.g. My Documents or My Music). Having both these options is a nice feature since some backups might target other items than just the installed programs! The interface is very easy to understand and side buttons control all the core functions of the software. An interesting option is the "Import Plug-in" function. This significantly increases the flexibility of the program, as custom items can be specifically targeted by users. The default plug-in editor is Notepad, but users can change this in the "Options" window. Customize tasks by adding other items, such as registry keys A very nice function is the ability to select a particular file or folder. This is performed by using the "Custom" button on the left panel. Registry keys and commands can also be saved to disk. Storing keys from time to time is important, because the Windows Registry can become cluttered with left-over entries. This can slow down the speed of the computer and can even lead to system crashes. Therefore, having this option makes the program very powerful. The application generates a log file that details all the performed operations. This facilitates backtracking or simply viewing these tasks. Just as well, this is a great method of keeping archives of past tasks. To conclude, CloneApp is a simple backup tool for lightweight operations. More improvements will surely make this program stand out against the multiple alternatives currently available! Although I have a question: I have a dual screen and since I use that, the main screen is the right and the other one is the left. So when I restart, the OS starts in the left (screen) of the other monitor that I use. I can't really move the windows that start in the left monitor and use the other one. Is there any way of working around that? Thanks a lot for this software. It works great for me! Is there any way of working around that? Sorry, I don't have any way to configure my monitor settings

to let me use a single monitor. If it makes it easier for you to use, I can send you the driver for your laptop, so you can change the settings so that your windows start on the monitor that
