Garden Warfare is a game where you can create and share worlds in a fantasy setting, in this case with retro style garden themed weapons. The game is 4 vs. 4 and during your battle it is almost like a combination of Rock Band and Grand Theft Auto. When you first power up you can choose a class, and then it is off to the races. Building games are great examples of social play where the players work together in teams to build something. Building games are "a form of social experience in which there are multiple players and their objective is to build a prescribed set of edifices on a map, or match the number of placed or knocked-down building blocks within a time limit - known as the build time." In Building games, a building is constructed in stages, and a player is responsible for the working of each of the stages, which are "collaborative and have a goal of achieving the complete set of in-progress stage objectives within the specified build time." 32] To predict that H3K4me3/H3K27me3 or H3K27ac/H3K9me3 ratio changes are coordinated, chromatin immunoprecipitation (ChIP) experiments are needed. There are few samples of such experiments available, but they suggest that sites of robust H3K4me3 occupy relatively little local H3K27me3 ([@B44]). These two chromatin states may be mutually exclusive depending on the activity of antagonistic PRC2-presented EZH2 subunit and MLL1/3 ([@B48]--[@B52]). Furthermore, H3K4me3/H3K27me3 may exclude K4me2/K27me3 and K4me1/K27me2 ([@B44]). Because of this intriguing co-operation, it is likely that limited methylation of K27 in the context of K4me3 will not influence global H3K27me3 patterns. Support for the function of H3K27me3 in embryonic development is generated from overexpression experiments which demonstrate reduced expression of developmental genes in H3.3 and SETD2-mutants ([@B44],[@B53]--[@B55]). However, due to over-representation of H3.3 and SETD2, researchers have speculated that H3K27me3 is a relay rather than an epigenetic base mark. It seems likely that not only H3K27me3, but also H3K27ac and H3K4me3 are

promoters or repressive marks. It is conceivable that loss of H3K4me3 in H3.3 or SETD2-mutants will disrupt, or at least attenuate this repressive effect ([@B56],[@B57]).
