Tip You can also create a new layer in the same way you create a new background, which we cover in Chapter 9.

### **Photoshop EXpress**

Adobe Photoshop is a photo editing and retouching program aimed at professional photographers, graphic designers, web designers, and other professional Photoshop users. The software was originally developed by Adobe Systems (formerly Adobe) and used only on computers running a Mac OS X operating system (OS) (today known as macOS). This program is the mainstream and most popular one, and many people use it for free for various editing and retouching tasks. Adobe Photoshop CC and Adobe Photoshop Lightroom are two cousins of Photoshop. They are also used by professionals for editing images, creating design layouts and editing digital photographs. Photoshop CC focuses on high quality photos editing and creating web graphics, while Lightroom is a photo editing and cataloging software. The most common update of Photoshop is Adobe Photoshop CC 2016. Adobe Photoshop is well known in the Photoshop community for its effects and for its control panels that allow you to change the look and feel of the app's user interface. Notable Features of Photoshop The user interface of Photoshop is more complex than that of the other applications that offer similar features. It's completely different from those available in other editors like GIMP. Here are some of the notable features you'll find in Photoshop: Editing Tools Editing tools are the things you use to alter or sharpen the image, or manipulate the colors and tones. They can be divided into the following categories: Adjustment tools. These tools allow you to change the settings that control your image in small increments. Q: How to add Custom User Model in django? I want to create custom user model in my django project. I have try to add custom user model like this: from django.db import models class User(models.Model): name = models.CharField(max\_length=50) surname = models.CharField(max\_length=50) def \_\_str\_\_(self): return self.name I would like to use this same user model in my project. I already test this by adding it in AUTH\_USER\_MODEL setting. My question how can I use this user model in my project? A: You'll need to import your User model in the models.py of your project, and then create an app that extends the User model. from django.contrib.auth.models import User class CustomUser(User): # code to your model here To answer the question, if you're asking "how do I change my project to use the custom model", then I can suggest one change, after creating your CustomUser model and the app, change your project's INSTALLED\_APPS setting to include your app. kern\_t ] SUBFIC PWD\_MEMORY JUMP-IF-JUMP-LABEL ( ) PASS-IF-
