Conceived and built within the confines of Total Immersion - Storm VR is not only a survival game, but a virtual reality adventure. Your only weapon against the elements and nature is your ability to solve enigmas, explore, and learn. Who are you? Where are you? A critical skill to survive: Exploration Survival is a collaborative effort. Only by physically exploring the environments can you find the solutions to unlock the mysteries of life and death. The snowstorm is just the beginning of a bigger project. We have 5 further levels planned out, and a detailed script in-progress. Each level will take place in different environments. A desert sandstorm, a jungle, a city. And each level will be connected by a narrative where your quest for survival is intertwined with your ability to resolve the mystery around your identity. CREATE STORYTELLING Your story will unfold in this VR game. You'll have a character that will be the key to the solution of the quest of your existence. You'll leave a piece of yourself behind by exploring and investigating, finding clues to the secrets of life, and learning from your mistakes. ABOUT CONCEPTS BOILS A reality is experienced by the human organism. At the same time it's an illusion constructed by the brain. We decided to approach the subject of reality from this point of view. This is more an artistic point of view. Storm creates a sense of interconnectedness by creating a shared experience between the player and the physical environment in which they play. Not only will your existence be pushed to the extremes but your body will become part of the environment as well. By exploring your environment you will collect life-saving material that will allow you to build shelter and find food to survive. You will build a new reality out of the materials that you find. You will become an environment. We think that this shared experience will lead to a greater understanding of our interdependent connection with nature. Who is the character of Storm? The Storm character is a man that was accidentally thrown into the middle of a snowstorm. They were in a regular helicopter but the pilot had other things to think about and flew away leaving him behind. Unable to get out the passenger sits in the cockpit and watches as the weather becomes more extreme. His body begins to deteriorate faster than his mind. His body falls apart and the surrounding nature does its part as well. This continues until finally he is free of his body and floats

Shibuya crossing is a action stealth game onlien which features a runner from the player's perspective and everyone is an obstacle. Through the fast paced game, players feel like they're in real-time, and fans can experience how to enjoy the thrill of being on the mission of running. Shibuya crossing also introduces a brand-new feature of the "incorrect timing"-style system, and a new "proposal"-style system of taking a picture of the cameras. Players will have a wonderful experience to capture scenes of the many types of the game. In order to accomplish this feeling, the team attempted to draw its features with the reality in mind. With an endless amount of playing parts to be explored, we hope to provide both the fans who enjoy stealth games and those that enjoy action games with unique experiences. Features: * Half circle (Expandable) - The entire half circle is unlocked for all the missions. By moving the map, it's possible to capture views that you can't see with the original camera setup. * Proposal - New game style that has players take a picture of cameras such as police cars or store entrances. It will be really interesting to take pictures of those already on the map, and it's possible to capture them from the moving vehicle. * Mis-timed - Players will be able to experience just like running in real time and discovering the unexpected by taking risks. It's great to discover a new feeling by making characters correctly set their timing. * Shibuya Crossing - The main feature for the game. One of the most famous Japanese districts, Shibuya, is a place where pedestrians and cars are running every second. With an endless amount of players on the city street, it is the perfect place to feel like running. * New Missions - New missions and interactions * New Effects - New effects, lights, and collisions for vehicles Does anyone need more info? The PNRTC is an inter-institutional center that is part of the University of Pittsburgh Health Sciences Center, and currently includes seven research and four training Cores. The center has major strengths in three research areas (child psychiatry/developmental medicine, neurobiology and co-morbid disorders, and neuropharmacology and therapeutics) and is also expanding into an innovative training program in Preclinical Behavioral Neuroscience. The training program is a randomized clinical trial to reduce disability associated with schizophrenia and bipolar disorder, and is receiving NIMH R34 and T32 support. In addition, the research theme underlying many of the PNRTC's cores (e.g., neurobiology, genetics) contains genes that may be important in bipolar disorder and schizophrenia and have major implications for the treatment of these illnesses. Furthermore, all of the PNRTC cores are strongly linked with the general University of Pittsburgh Neuroscience Program. The five research projects in the center have the following aims: Project 1: Comparative pharmacologic treatment of mania among community and hospital-based patients (David A. Kupfer, Director) Project 2: Mechanisms of the associations between early childhood adversity and adult neuropsychiatric illness (Bruce K. Green, Director) Project 3: A randomized clinical trial to prevent suicide in youth at risk of suicide (Karlen L. Lipinski, Director) Project 4: The role of the immune system in schizophrenia (Christopher R. Fairsean, Director) Project 5: The role of dopaminergic, serotonergic, and glutamatergic neurotransmission in the symptom of depression (T. Joseph Wise, Director). The four Cores in the center are: 1. Administration, 2. Clinical Assessment and Services, 3. Molecular Genetics, 4. Radiochemistry and Brain Imaging. The PNRTC is administered through the Office of the Vice Chancellor for Research. The Director and

Aveyond 4: Shadow of the Mist (known in Europe as Aveyond 4) is a fantasy role-playing video game developed by Aeronautical Industries and published by Interplay Productions in 2005 for the PlayStation 2. It is the fourth game in the Aveyond series. The game features an open world, combat resolution system, and day-night cycle similar to that seen in The Elder Scrolls III: Morrowind. It is a prequel to the previous game, and features new and returning characters, places and features. It also features a large addition of content for the player to explore after the main storyline, the more difficult Nightmare difficulty mode and many customisation features. The first public demo of the game was released on the PlayStation Network on August 27, 2004. Gameplay Aveyond 4: Shadow of the Mist is set in a vast area of the Forgotten Lands, which is divided into several islands and plains. Player controls a series of characters who can go on quests to explore and complete a variety of tasks, collect loot and battle enemies to gain experience and gold to use in shops and at inns. The landscape of the Forgotten Lands appears in parts to be ruined, expansive and detailed, and many fantastical beasts roam the landscape. Combat is similar to that seen in several other role-playing games; characters wield equipment with a series of skill abilities, command followers to perform combat actions on enemy-controlled or friendlies, and can interact with objects to gain additional power to perform special attacks or build up additional combat abilities. Character development During the first hour of gameplay in the main campaign, character-building is handled through an in-game electronic library which can be accessed through the game's menus. The library allows the player to continue build a character after the last completed section of the main storyline. A full roster of local and online quests, as well as Night Flight, an optional online mode with progression to earn new spells, actions and game statistics at rank 2, is included. Editing custom skills and spells can be found in a third-person view of the character in the central menu screen, before going on to edit the name, level and power of the skill. Other work can be done in the same way, like the customised appearance of a character. In addition to this, characters in the game to date can be modified by providing a unique name for each of the portrait frames that exist in the game. New levels can be added through newly accessed NPC stores. They

Bodyweight workouts are designed to change our relationship with physical activity. They are dynamic, fun, and effective. Being a weight means different things to different people. Weightlifting is not our first choice for exercise, it's not always easy to get to the gym, and fitness trackers are often limited. Weightlifting also has a traditional, rigid mindset and may not always match with our preferences or our state of mind.
