OBJ2CAD 2007 import OBJ files and convert 3D entities into 3D solids OBJ2CAD 2007 can read and create.obj files for you based on the definitions defined in the.obj file. When you import a 3D object from a 3D.obj file, it generates a new solid entity which you can scale or view in any direction. When you import your.obj file, the import entity is automatically converted to 3D. You can also convert any 3D entity in your drawing directly to a 3D solid. If a 3D object in your drawing has a 3D face which is not defined in the.obj file, it is automatically created, and then you can select the face to be included in the 3D solid by choosing "Select faces to convert to a solid object". You can also convert an area by choosing "Select faces or vertices to convert to a solid object". When you import a 3D OBJ entity, OBJ2CAD will open the.obj file where you can see the description of the 3D entity, and view its mesh, vertices, face and textures.
