STEP 4 OPEN Autodesk Autocad in your Explorer. See the top right corner, there are two buttons, don't touch them, just look at them, you have to see what the name of the file you have saved in step 3 is. That name is hidden, we are going to remove it, so make sure to look at it, and hit ESC. (The name we will remove is hidden because we have all the shortcuts on the left side. Remove " " and paste the file name there. Look at the name, press ENTER, to see if it's changed.) STEP 5 Change the shortcut of the autocad file you have just renamed to the right one. Double click on "Autocad.exe" to find the shortcut. STEP 6 Click on the Properties option on the right of the shortcut, and look on the Shortcut tab. Change the "Start in" parameter. STEP 7 Look at the start menu: Right click on Autocad, and select the "Run as administrator" option. (If the Autocad program is already running, then it won't appear in the start menu.) STEP 8 Right click again and select the "Show executable in folder" option. (If the Autocad program is already running, then it won't appear in the start menu.) And there's the program on the start menu. Now we have to add the program as a shortcut, to the start menu. Right click on the start menu, and select the "Properties" option. (The start menu will show as a folder, so you have to double click on it, then select "Properties".)

What's New In?

The new Markup Import feature uses an intelligent Recognizer technology to detect layout objects from drawings that are similar to the imported drawing. You can now import layout objects in CAD like "manholes", "bulkheads", "jambs", "casing", "bolts", "plate", and "pipe". (video: 3:07 min.) You can now automatically add an import path for high-level objects that are similar to imported drawings. This new method allows you to import them in the correct layout quickly and easily. (video: 4:04 min.) We also added a new Markup Assist function to help you import digital objects into drawings. It assists you in selecting or creating the correct, most appropriate object to import. It supports a new method that lets you import an object from a list, and also supports the "Add from Current Selection" function. This feature, which allows you to import from a list, is especially useful for importing CAD files. (video: 2:56 min.) Automatic Object Recognition: Rapidly send and incorporate feedback into your designs. Autodesk technology now uses machine learning to automatically recognize objects in your drawings. The new and improved Automatic Object Recognition technology now allows you to change objects in the CAD file, and then seamlessly re-draw them into your design. With the new technology, you can: Correct any inaccurate object recognition in your drawings by editing the geometric data. Use a new function to

correct an error by creating a new object that is the exact same as the object you were trying to correct. (video: 2:24 min.) Import drawings that were created with a different technology such as SolidWorks or Onshape. You can now easily add or remove objects using the new "Add from Current Selection" function. When you use this new function, the existing objects in the drawing are automatically deleted. If you are using a drawing created in a different CAD application, or if you are importing an item that has been previously recognized by AutoCAD, the correct recognition is kept and is used to draw the object. You can now import generic objects such as "shelf", "tube", "pipe", and "vessel". (
