The Trusts, who purchased a massive parcel of land right on the corner, thought they'd get around planning by the simple expedient of doing the exact same thing in a new place. They've got a 60-story tower built on top of a parking lot on the corner of Delaware and Washington, and a funky glass building for a restaurant to go in, across from the building on the corner, too, which will be a new Whole Foods. The owners think the

The impact of the water environment on the structural and dynamic properties of DNA and protein is assessed by extending a comparative analysis of the effects of hydration on three systems: (i) protein-DNA complexes; (ii) single-stranded B-form DNA; and (iii) single-stranded A-form DNA. These properties are related to the ability of the three types of molecules to pack efficiently and to facilitate and/or hinder the access of substrates to active sites in their folded and unfolded conformations. Protein-DNA interaction is largely determined by the specific amino acid residues involved in DNA contacts, the ionic conditions and the hydration shell of the protein or DNA chain. A comparison of the effects of water on DNA and protein structure and dynamics in the presence of various biologically relevant solutes shows that the degree of protection of the DNA molecule and protein from the solvent depends on (i) the interaction of the molecule with water; (ii) the binding modes and strength of the protein-DNA contacts; and (iii) the solvent capacity to dissolve the free ions and the counterions associated with the protein and DNA. Our results reveal that water is an essential tool for the formation of protein-DNA complexes, but can also exert simultaneous negative and positive effects on specific aspects of the interactions. These opposing effects may be used to efficiently control the stability, conformation, dynamics, and catalytic activity of protein-DNA complexes, depending on the specific demands of the biological system. The present invention relates to door locks and more particularly to a lock mounting bracket useful for mounting a lock to a door or the like. Various types of locking devices have heretofore been employed for securing a door to a frame or door frame. In addition, various types of lock mounting brackets have been proposed for mounting locks to doors. In one type of known door lock mounting bracket, a bracket is rigid
