Q: How to create set of ranges of dates from date range using pandas? I have an input date range in the following format 01-10-2018 : 04-10-2018 I need to create a new column with each day in the range between the start and end date for each row. so I need a new column : 01-10-2018 02-10-2018 . . . 04-10-2018 05-10-2018 . . . I was not able to find a way of doing it. A: You can use iterrows() with apply() + strftime():

```
df['new'] = df['date'].apply(lambda x:
    strftime('%Y-%m-%d', x))
```

print (df)

date	new
01-10-2018	0
04-10-2018	1
01-10-2018	2
04-10-2018	3
01-10-2018	4

For datetimes need convert all values to datetimes: df['date'] = pd.to_datetime(df['date']) Then convert output of apply to strings: df['new'] = df['date'].apply(lambda x: strftime('%Y-%m-%d', x)).astype(str)
