Coeliac disease, or gluten-sensitive enteropathy, is a permanent intolerance to dietary gluten. The disease is characterised by mucosal inflammation involving mainly the small intestine. The cardinal signs and symptoms are malabsorption of both dietary and oral, and the most frequent symptoms are diarrhoea and abdominal pain. Pregnancy is a critical period in the natural history of coeliac disease, since it is when the woman is most vulnerable for malnutrition and when the first signs of the disease are seen. Pregnant women with untreated coeliac disease are at risk for overt gastrointestinal symptoms, obstetric complications and long-term health consequences for the child. During pregnancy, the disease may be under-diagnosed and may remain undiagnosed until delivery. The management of patients with coeliac disease should involve a multidisciplinary approach, with endoscopy, dietary restrictions, and evaluation of response to gluten-free diet as the core procedures. The aim should be, whenever possible, to postpone pregnancy until after delivery. Therefore, the identification of pregnant women with coeliac disease is crucial, since it will prevent certain intestinal and obstetric complications in these patients. Duchesnay Round Barn, Vermont Duchesnay Round Barn is a historic round barn located in the town of Rensselaerville, Clinton County, Vermont. Built in 1906 and rebuilt after a fire in 1923, it is a well-preserved example of a round barn built in a period when the development of new, larger round barns in New England was declining. It was added to the National Register of Historic Places in 2009. See also National Register of Historic Places listings in Clinton County, Vermont References Category c6a93da74d
