While in Damascus for two days of talks, the secretary of state told a Syrian interviewer that Syrian President Bashar al-Assad "changed, very clearly," and embraced Russia instead of Iran. He called the visit "a new beginning" in the strained US-Syrian relationship, and said he hoped to lay the groundwork for a permanent cease-fire in Syria. Conventionally, there is a series of machining operations for manufacturing a series of types of products such as a crank arm. For example, in machining an inner surface of a cylinder, in machining a crank pin, and in machining a crank pin hole, there is a machining operation for forming the inner surface of a cylinder to a shape conforming to a cylinder of a crank arm, and a machining operation for forming a shape conforming to a crank pin, and a crank pin hole. Moreover, an outer diameter of the crank arm after machining is slightly different from an outer diameter of an inner diameter of the cylinder. Therefore, for example, if machining the outer surface of the cylinder, there are cases where some machining is unnecessary, and thus waste is produced. Consequently, it is necessary to form a cylinder to a shape conforming to the inner surface of a crank arm by machining while changing machining tools. This work is troublesome and requires considerable time, and thus the efficiency of machining is low. If machining is performed by changing machining tools, however, c6a93da74d
