All EaseUS Data Recovery Wizard All 18.20.2 Serial Key - Free Download from Softonic All EaseUS Data Recovery Wizard All 18.20.2 Serial Key, Main Features: - It can recover all of your deleted and formatted files easily - Supports all Windows operating systems - View your lost files and extract them All EaseUS Data Recovery Wizard All 18.20.2 Serial Key - Free Download from SoftonicQ: How to detect if the server is down I have written code to check the server status using the tool livehttpheaders(). This tool checks the server response time, and it tells how frequently the server responds to the client. I am looking for a way to distinguish between the server being down and the server being slow. If the server is down, the client should report to me something like this: "The server is down", and the script should continue with its next action. I have tried doing an if statement using a global variable, but the variable changes even though the server is down. I am not looking for the ideal solution, but rather I am looking for a way to distinguish between a server down and a server being slow. A: In theory, you could write your own service to ping a server and send you a heartbeat. This would avoid the problems with the HTTP response time limit.
