For those who upload more than one image at a time, the ability to grade changes in light or color quickly and easily is great. When I compare the two previous versions of Lightroom, the 5th version requires almost no effort to accomplish a grading change with all the features you miss in version 4. That's because the 5th version has the new "Save" tool, which is now only available to paid users. This means that Adobe does offer a reason for upgrading to version 5. I am not a big fan of whether the paid version or the Free version has the best-quality features. While the new features in Lightroom 5 seem quite impressive at first glance, I think everything else about them is essentially the same as in previous versions. In other words, at the end of the day, Lightroom 5 most probably delivers the same result for most users. In the new version of Lightroom, there are some Instagram-specific features that are very functional. Most notably, you can use Lightroom to organize your photos before exporting them to Instagram, which seems a much more smoother and user-friendly experience as opposed to exporting images from the mobile app and then having to find and arrange them in the Instagram editor. Lightroom has the capability to tag your images in Lightroom and then have a backup of these tags in your photos in the Instagram editor. However, saving the image data in Lightroom does not automatically mean they will appear in the Photo Stream application on your iPhone or the Camera Roll of your iPad. You need to right click on the image and select "Copy to Photo Stream" or "Copy to Camera Roll". That said, I don't mind having to do that the old-fashioned way since my iPad constantly syncs with my iPhone or my iCloud account.

Adobe software engineers have hacked on Photoshop and dropped a bunch of new features on the map. Photoshop CC helps users quickly apply diverse effects and filters, automate adjustment layers, create and vignette realistic gradients, vectorize paths without rasterization, create custom shadows in a snap, and more. “Our vision has always been to have Photoshop not just be the best desktop editing tool but also the best at any surface,” said Steve Mayeda, Senior Director of Photoshop at Adobe. “Now, we’re looking at how we can take the amazing experience that we’ve created for desktop editing into the web, browser and mobile, and turn that into transformative experiences that meet the demands of creative professionals everywhere.” One of the most significant and anticipated desktop features to come to Photoshop during this last year is Super Resolve. Designed to instantly and automatically correct lens distortion, vignetting and other types of visible defects from camera-induced blur, Super Resolve lets Photoshop users effortlessly correct overlooked issues that sometimes become a nuisance. With the desktop version of the feature, users can now immediately correct lens and camera-induced blur at any time and from any angle and remove camera defects. For photographers and videographers, Super Resolve is “the one-stop cure for a quick and simple fix,” Mayeda says. With it, the user can grab and add a Lens Profile to understand the lens characteristics of the camera in front of the lens, and then warp any files up to 40-times when viewed from different angles to fix any types of distortion.
