This and other improvements in image alignment and editing and the ability to crop and rotate images will make it faster and easier to align, resize and rotate assets so they fit any need, from one-page layouts to banner ads to or photo-based email templates.

This makes filling in missing objects with either the original or non-original content even easier. For example, to replace the sun in an image with the new apple, you will simply select the sun, choose Replace and choose the correct color from the new Fill panel in the upper right of Photoshop. In addition, with the Fill tool, you can now easily replace an object such as a logo with other new logo variations, saving you precious time.
- Darkroom improves fine-tuned image workflows - The new Darkroom feature lets you store custom settings for each image or layer with a single click, making it easier to fine-tune an image. Darkroom also enables you to store the current image view and view modes, and

the current image editing tools and brush settings. With the new darkroom window, you can save your custom settings for each image or layer, and bring quickly-and-easily the exact darkroom settings you need for all your projects.
